ABOUT ME

I'm a data engineer: my job is getting data where it needs to be, on time and with no surprises. At VisionLab I'm the team's only data engineer: I own the production pipelines in Airflow and dbt, catalog and lineage in OpenMetadata, data governance and on-premise AI.

Before that, I spent a year at Sermicro shipping conversational agents and AI automations to production. I started in data at Next Digital Hub, with Kafka streaming and Snowflake pipelines. I hold a Master's in Big Data (UNIR) and the Azure AI-900 and DP-900 certifications.

EXPERIENCE

VisionLab

Data & AI Engineer

VisionLab | May 2026 - Present
Sole data engineer on the team, responsible for the entire platform:

- Built the archive retention and purge pipeline: dry run, triple check, and only then the real deletion. No way back.
- Maintain and extend 30+ Airflow DAGs: the ones behind what the business queries every day.
- Model and transform data with dbt (20-50 models), with tests that catch errors before they reach a report.
- Maintain the catalog, lineage and documentation in OpenMetadata so anyone can tell where each field comes from.
- Dremio for querying and source integration: legacy systems, SAP, Salesforce and the factory database.
- Built the on-premise AI platform: governance and Superset dashboards.
- Refactored legacy scripts: faster runs, fewer errors, less manual work.
- Stack: Airflow, dbt, OpenMetadata, Dremio, Superset, GitLab CI/CD, Python, SQL, Spark, Docker, Kubernetes.

SER MICRO GROUP digital

Conversational AI & Hyperautomation Engineer

Sermicro | Mar 2025 - May 2026
Technical lead on conversational AI and automation projects:

- Took 3-5 conversational agents to production with DRUID AI and GPT functions, from requirements to live support.
- Automated processes with UiPath and Power Automate: AI invoice reading, CV screening and thousands of ITSM tickets a month that nobody has to write.
- Wrote the PDDs, coordinated with the technical team and the client, and dockerized and refactored the existing pipelines.

EXPERIENCE

Data Engineer
Next Digital Hub | Mar 2024 - Aug 2024
Joined the data team in a Scrum environment and worked across the full cycle:

- Built real-time streaming pipelines with Kafka and REST APIs with FastAPI.
- Processed large volumes with Spark and PySpark and transformed data with dbt on Snowflake.
- Orchestrated data workflows with Apache Airflow.
- Trained and deployed predictive Machine Learning models on AWS.
- Built ETL processes for cleaning and transformation, and kept optimizing them.
- Analyzed and visualized data with Power BI and Pandas, with Pytest covering what broke most.
- Dockerized where needed.

EDUCATION

UNIR-Universidad Internacional de La Rioja
Master's in Big Data and Data Science | 2025 - 2026

- End-to-end Kafka ingestion, PySpark processing and customer modeling.
- Dashboards built for the business, not for the data team.
- Cleaning and normalization of the datasets that feed the models.
- ML models to predict customer churn and explain why customers leave.
- Architecture designed and documented.
- Full orchestration with Airflow, from ingestion to final load.

IES Virgen de la Paloma
Higher Technical Diploma in Software Development | 2022 - 2024

- Java and Python development
- SQL (Oracle, MySQL, MariaDB...) and NoSQL (MongoDB)
- Web: HTML and CSS

IES Nuestra Señora de La Almudena
Science Baccalaureate | 2020 - 2022

CIS The College for International Studies
U.S. Embassy Scholarship | Go American English | 2017 - 2019

SOFT SKILLS

- Logical thinking
- Self-learning
- Active listening
- Teamwork
- Adaptability
- Flexibility

TECH STACK

- Languages: Python, SQL, Java, R
- Data: Kafka, Snowflake, Airflow, dbt, Spark, PySpark
- DevOps: Docker, Kubernetes, GitLab CI/CD, Dremio
- AI/RPA: OpenAI, Groq, DRUID AI, UiPath

LANGUAGES

Spanish
Native

English
B2 certified (preparing for C1)
